Summary

Currently a CS undergrad student at Bangladesh University of Engineering & Technology, I am keen to learn things regarding technology. I am interested in web development, particularly the backend. I also casually make projects related to Flutter and enhance my knowledge of machine learning.

Love to learn about various aspects of computer science and related fields. Recognized for possessing a strong passion for learning and being able to do hard work.

Projects

- **Portfolio Website:** My personal website made with Jekyll. It showcases my posts and other kinds of stuff. The links to the GitHub repository and the live website are as follows:
  - Abdus-Samee/portfolio: My personal website, showcasing my posts and projects I've done up until now. (github.com)
  - https://abdus-samee.github.io/portfolio
- **NotionJS:** A simpler version of Notion website built in order to keep in track of our day-to-day tasks.
  - https://github.com/Abdus-Samee/NotionJS
  - NotionJS: Drag&Drop ReactJS app supported by NodeJS and MongoDB - YouTube

- **Car Warehouse:** A car selling and buying website made with the JavaFX as part of a project in university. The link to the live website and the GitHub repository is as follows:
  - [Abdus-Samee/JavaFX-Car-Warehouse: JavaFX Car Management Offline. (github.com)](github.com)
- **Stack Overflow Clone:** A copy of the website made with NodeJS. It was built in order to practice my NodeJS skills along with MongoDB. The relevant links are as follows:
  - [Stack Overflow (stack-overflow-site.herokuapp.com)](stack-overflow-site.herokuapp.com)
  - [Abdus-Samee/Stack-Overflow: A backend supported Q/A site built as a clone of the original Stack Overflow with some key features. Supports user authentication, post creation, answer submission, searching of posts, adding tags etc. (github.com)](github.com)
- **DX-Ball:** My first project back at varsity made with iGraphics and C. The link to the GitHub repository is:
  - [Abdus-Samee/DX-Ball-Game: My first project on iGraphics. A game on DX Ball. (github.com)](github.com)
- **CodeForces Flutter App:** A flutter app developed using the codefroces API. The link to the GitHub repository:
  - [Abdus-Samee/Codeforces-Api-Flutter-App: An app in the process of building where one can query various features regarding a handle of Codeforces platform. The Codeforces API has been used here. It now only shows dummy data of a particular user in PieChart. (github.com)](github.com)
